Moss transport card: unopened frozen packs remain sealed for 10 hours at room temperature before external inspection.

Moss emergency card: the backup freezer operates at minus 16 degrees Celsius and is for transfers lasting at most 72 hours.

Moss exchange card: external recipients acknowledge receipt within 9 days; missing acknowledgement starts a follow-up, not automatic replacement.

Moss review card: a GR exception requires both a conservation justification and a named review owner.

Moss wet sample card: samples above the MC limit return to conditioning; they are not discarded automatically.

Moss loan card: permanent preservation packs are not lent for classroom demonstrations.

Moss terminology: DRI means the directly responsible individual for a review, not the equipment manufacturer.

Moss climate card: freezer door openings longer than 4 minutes are entered in the environmental incident log.

Moss traceability card: a renamed species retains its original LOT and gains a taxonomic revision note.

Moss label card: a damaged external label is replaced only after the inner label and database entry agree.

Moss transfer card: every emergency transfer records source freezer, destination freezer, start time, and LOT list.

Moss audit card: the conservation officer approves the final emergency transfer list before the move.

Moss sample card: replicate germination counts use 50 seeds per tray and 4 trays per test.

Moss balance card: a tray spoiled by equipment failure is repeated; it is not scored as zero germination.

Moss archive card: exchange correspondence is retained for 8 years.

Moss ethics card: a recipient may not infer permission for commercial multiplication from a sample receipt.

Moss visitor card: public tours remain outside the archive freezer and do not handle permanent packs.

Moss scope card: field collection permission and commercial seed pricing are not specified in this operational guide.
